Modern service industry business owners and managers have so many different pieces to keep track of, that it is very easy for unseen inefficiencies to lead to potential loss of revenue. Failure to recognize and track trends, uninformed purchasing decisions and unmitigated employee theft can lead to huge, and often unnoticed losses. Many business owners fail to recognize these easily avoidable pitfalls. Revel Systems' Point of Sale (POS) tracks and reports on all business activities, including employee tracking, scheduling, payroll, inventory management, and detailed sales reporting, as well as direct QuickBooks integration. Business owners and managers can keep tight control over their incoming revenues and outgoing costs.

Designed specifically with full service restaurants in mind, the Revel Table Service POS is the ultimate in quick, convenient and easy to use restaurant management software. Orders automatically print to kitchen stations, with easy and intuitive table layout screens to keep track of client tables. With our integrated CRM system, business owners can track loyal customers to cater their services for increased customer satisfaction. Integrated loyalty and gift card programs allow you to attract repeat customers and build your loyalty base. With tableside ordering options across a range of tablets, including the iPad Mini, there is a custom solution for any restaurant. And with enterprise reporting, the largest restaurant chains or groups can rest assured they have a POS that can scale with their business.

Administrators and managers can also set up automatic alerts and reports as well as track trends, inform purchasing decisions, and monitor potential fraud. With included support and software updates, the customer will always have an up to date and fully functional system.

Revel Systems' Point of Sale Management Console and corresponding iPad application are cloud based; all reporting and data is accessible in real time from any web browser.
